Professional Summary

Christer Johansson is a Front End Engineer with over 20 years of experience in web development, specializing in React, JavaScript, and HTML/CSS to create highly responsive and interactive web applications. With a robust background in information architecture and web content management, Christer combines technical expertise with a commitment to user-centric solutions.

He holds a Bachelor of Science in Informatics from the University of Borås, and his career is marked by roles at leading technology firms and contributions to high-profile projects.

Personal Summary

Outside of work, I am passionate about both digital and outdoor activities. As an avid online computer gamer and active member of several Discord communities, I engage in discussions and technical development of front-end technologies. My love for tech extends beyond the screen, with interests in airsoft, disc golf, biking, power walking, and photography. As an amateur photographer, I enjoy capturing landscapes and macro shots, blending my appreciation for nature with my technological pursuits. Additionally, I am a fan of sci-fi, adventure, action, and comedy movies and shows, and I have an eclectic taste in music, from rock and metal to trance, house, electro, and smooth jazz.

I also enjoy the occasional fine dining experience, whether with friends or by myself, and my reading interests include history, financial history, and elegant programming, reflecting my intellectual curiosity. This mix of activities and hobbies showcases a balanced lifestyle that merges the excitement of technology with the tranquility of outdoor adventures and creative endeavors.

Technical Proficiencies

- Front-End Development: Expertise in React, JavaScript, HTML5, CSS3, and TypeScript for dynamic and efficient user interfaces.
- Software Containers: Proficient in Docker for consistent and efficient deployment processes.
- CMS and Web Platforms: Skilled in EPiServer, Joomla, SiteVision, and WordPress.
- Frameworks: Proficient in NextJS and Node.js for building robust web applications.
- Version Control: Advanced knowledge of Git and Visual Studio Team Services.
- Development Tools: Experienced with Visual Studio and Visual Studio Code.
- Design and Accessibility: Expertise in CSS, TailwindCSS, WCAG, and WAI for creating accessible and visually appealing user interfaces.
- Testing: Proficient in unit testing, integration testing, and end-to-end testing.
- Agile Methodologies: Experienced in iterative development and project management.
- Information Architecture: Skilled in organizing and structuring web content for optimal user experience.

Educational Background

- Front-End Developer with React, Massachusetts Institute of Technology, 2017
- Bachelor of Science in Informatics, Library and Information Science, University of Borås, 2014
- Electronic Commerce (15 credits), Kristianstad University, 2011
- Web Developer (60 credits), University West, 2011

Certifications

- Sr. Front End Developer, Certificate of Excellence, Volvo, 2024
- Front-End Developer, Meta, 2023
- ReactJS Developer, TESTDOME, 2020
- Front-End Developer with React, Massachusetts Institute of Technology, 2017
- Agile Scrum Training, Udemy, 2016
- GIT Version Mngement, StackSkills, 2016
- Certified Web Developer, Udemy, 2015

Professional Experience

AI Software Engineering Advisor

Boston Consulting Group (BCG), Stockholm, Sweden

Aug 2024 - Nov 2025 · 1 yr 4 mos

Key tasks:

- **AI Strategy:** AI strategy services to help businesses understand where AI can add value and how to integrate it into their operations.
- **AI Innovation:** Focused on driving innovation through AI, helping businesses develop new products and services that can reshape their industries.
- **Operational Optimization:** Used AI and machine learning models to improve operational efficiency, automate tasks, and drive cost reduction.

Clients results became more consistent and reached much higher volumes. Availability shifted to 24/7. The cost was reduced to a fraction of what had previously been paid for.

Clients content production increased threefold (3x) — and the quality improved as well. The clients SaaStr AI handled over 100,000 chats with founders and B2B executives. Their newly configured AI autonomously reviewed more than 1,000 speaker submissions for SaaStr Annual and AI Summit.

Additionally, the clients SaaStr AI SDR built up a 500,000 EUR pipeline within just its first few weeks, outperforming every human SDR who had worked with the client before.

Spearheaded the hands-on adoption of AI-powered development tools across portfolio companies, directly coaching engineering teams and CTOs in transforming their coding workflows. Implemented AI-driven code review, code generation, and test automation solutions, resulting in measurable increases in productivity and software quality.

Facilitated pair programming sessions, live code reviews, and workshops to ensure teams achieved tangible improvements—reducing cycle times by up to 30% and defect rates by 20%. Tools and platforms included GitHub Copilot, SonarQube, OpenAI Codex, and custom AI/LLM integrations tailored to unique stack requirements. Championed a pragmatic, results-first approach, empowering teams to move beyond theoretical strategies and achieve lasting gains in their day-to-day engineering work.

Senior Front End Developer

Sigma Technology Group AB, Göteborg, Sweden

December 2021 - May 2024

- Conducted code reviews and provided mentorship to junior developers, fostering a culture of continuous improvement.
- Implemented microservices architecture using Node.js and Docker, improving system scalability and maintainability.
- Formed an advisory board with senior developers to guide company management through the process of building an in-house tech firm.

GPT UC Prompt Engineer

OpenAI, remote

February 2023 - March 2024

Use Case Development:

- Developed various use cases for OpenAI's ChatGPT models 3 and 4, exploring potential applications in different industries.
- Created and refined prompts for training AI tools to provide more accurate and relevant responses to user queries.
- AI Response Refinement:
- Worked on processes to fine-tune the AI's responses, ensuring alignment with human expectations and improving the overall user experience.
- Generated prompts that produce relevant and high-quality text for copywriting, marketing, and e-commerce products.
- User Interface Prototyping:
- Utilized ChatGPT and Figma to prototype user interfaces for web applications, enhancing the interactive capabilities of AI-driven solutions.
- Developed headless web applications with seamless API integrations to provide users with specific information and support.
- Conducted data analysis and forecasting of financial data, including price prediction of cryptocurrencies, stock prices, and portfolio management.
- Utilized predictive analytics to provide actionable insights for financial decision-making.
- Implemented API integrations in headless web applications to assist users with information on specific cases, such as customer support.
- Technical Skills: Proficient in CSS, React.js, JavaScript, and HTML5, ensuring the development of robust and responsive web applications.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Front End Lead Developer

Västra Götalandsregionen, Göteborg, Sweden

September 2023 – May 2024

Project Overview: Led the development of a collaborative web application for regional libraries using a headless architecture based on Umbraco, REST APIs, React, Node, Next.js, and Tailwind, with LLM-driven workflows embedded across the delivery lifecycle.

Key Contributions:

- Designed and implemented the frontend architecture and CI workflow, integrating current LLMs for code generation, refactoring, and test-scaffold creation to accelerate delivery while maintaining code quality.
- Integrated ChatGPT and other LLM APIs into the product for conversational search, content assistance, and automated librarian/user support, improving self-service and reducing manual workload.
- Established AI-assisted analytics pipelines, using LLMs to summarize usage data, surface insights, and support product and content decisions for the library stakeholders.
- Used LLM-based tools for documentation, meeting notes, and backlog grooming, streamlining project management and communication within the cross-functional team.
- Acted as developer, mentor, and advisory architect, coaching the team on safe and effective use of AI tooling in the React/Next.js stack and reviewing AI-generated code for security, performance, and accessibility.
- Ensured high standards of usability and accessibility (WCAG-compliant UI), and integrated Umbraco CMS via a headless REST API for structured, maintainable content delivery.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Front End Developer | Consultant

Kinnarps AB, Kinnarp, Sweden

December 2022 – June 2023

Project Overview: Led a team building an internal Vue application with TypeScript and Tailwind CSS to improve sustainability, accessibility, and internal workflows, progressively incorporating LLM-driven tooling into development, documentation, and decision-making.

Key Contributions:

- **Development and Delivery Conventions:** Defined DevOps, Git, GitFlow, and commit conventions, embedding AI-assisted code review and test-case generation (using contemporary LLM tools) into the CI pipeline to improve quality and shorten feedback loops.
- **Frontend Playbook:** Authored a comprehensive frontend playbook, using LLMs to draft, refactor, and standardize guidelines, patterns, and onboarding material for the Vue/TypeScript stack.
- **Data Fetching Strategy:** Designed a data fetching strategy using SSR, SSG, CSR, and ISG, leveraging AI-assisted analysis of performance traces and logs to fine-tune caching, loading behavior, and API usage.
- **Frontend Development Structure:** Organized daily SCRUM, Git responsibilities, and PR management, using LLMs to summarize standups, propose backlog refinements, and help craft technical specifications and design discussions.

Lead Front End Developer

Financial Assessment Application Project (Sigma Technology), Göteborg, Sweden
December 2022 - February 2023

Project Overview:

Led the development of an application designed to provide a comprehensive assessment of an individual's or organization's financial capability, incorporating LLM-assisted analytics and insight generation into the product and delivery workflow. Responsible for creating an interface for both application usage and visualization of business statistics, using AI-assisted design and content generation to accelerate iteration and communication.

Technology Stack:

NodeJS, SWR, RestAPI, ReactJS, TypeScript, NextJS, Tailwind CSS, React-hook-forms, ApexCharts, Ollama, Claude, LLMs

IDE: Microsoft Visual Studio Code (VS Code), Obsidian MD (Notes)

Implementation:

With no existing graphic profile for the task, I had full creative freedom to design both UI and UX for the application, using contemporary LLM tools to explore variants, refine copy, and document decisions. Utilized Tailwind CSS and React to develop the user interface. Implemented mocked data by masking the API using NextJS API routes. Developed the application as a headless app, where all data is fetched from the backend via APIs.

Key Contributions:

- Planned and implemented frontend frameworks (JS, CSS, HTML, Accessibility, API) using React, Next.js, Tailwind CSS, with AI-assisted code generation, refactoring, and testing.
- Analyzed and improved the existing interface and application, using LLM-based summaries of stakeholder feedback and usage data.
- Customized the VSCode environment with extensions, hooks, and AI pair-programming tools to speed up development.
- Defined DevOps practices, Git/GitFlow, and commit conventions, integrating AI-assisted code review and documentation into the workflow.
- Led UI/UX design and redesign with Tailwind CSS and React-Hook-Forms, using LLMs for UX copy, validation text, and design documentation.
- Delivered reusable frameworks and boilerplate, and used AI tools to support architectural options, risk analysis, and technical specifications.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Front End Engineer | Consultant

Volvo Group Connected Solutions, Göteborg, Sweden

June 2022 - November 2022

Source: <https://www.vinnova.se/p/smooth-system-av-system-for-hallbara-urbana-godstransporter2/>

Project Overview:

Smoovit Sustainable Urban Deliveries. Built and validated concepts for making sustainable urban deliveries profitable using a system-of-systems (SoS) approach, progressively introducing LLM-driven decision support for planning, coordination, and stakeholder communication.

Establishing a consolidated flow of goods presented challenges around incentives for collaboration, use of physical infrastructure, and the need for supportive IT systems for information sharing, dynamic decision-making, and sustainable business models, where AI/LLM services were used to summarize data, propose route optimizations, and support scenario analysis.

Key Contributions:

- Led a team of engineers to develop a headless front end logistics application that coordinated deliveries and reduced environmental impact, with AI-assisted workflows for exploring UI variants, copy, and configuration options.
- Redesigned the application interface with Material UI and React Hook Forms, using LLMs to generate and refine UX copy, validation messages, and user guidance.
- Framework Planning and Implementation: Designed and implemented JavaScript, CSS, HTML, Accessibility, API, and frontend frameworks with React, Next.js, and Material UI, supported by AI-assisted code generation, refactoring, and test suggestions.
- Architectural and Procedural Consultation: Provided guidance on architecture and project procedures, using LLM tools to draft architectural proposals, summarize technical discussions, and document standards and patterns.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Front End Lead Developer | Consultant

Chalmers University of Technology, Göteborg, Sweden

January 2022 - June 2022

Project Overview:

Proposed and led a shift from a React-only setup to a more robust Next.js, TypeScript, and Node.js architecture with a headless CMS and GraphQL API, incorporating contemporary LLM tools for design exploration, documentation, and stakeholder communication. This headless, AI-assisted approach provided a more scalable, efficient, and well-documented framework for content production and delivery across the university.

Key Contributions:

- Led a team of 5 engineers to build a headless frontend application, using LLM-assisted code generation and refactoring to accelerate implementation and improve quality.
- Leadership and Mentorship: Acted as Frontend Lead, coaching junior developers on Next.js/TypeScript and on safe, effective use of AI coding assistants in daily work.
- Customized Development Environment: Set up a tailored VSCode environment with custom extensions, hooks, and AI pair-programming tools to streamline development.
- Development and Delivery Conventions: Established DevOps practices, Git conventions, GitFlow, and commit standards, integrating AI-assisted code review and documentation into the workflow.
- Frontend Playbook: Created a comprehensive frontend playbook, leveraging LLMs to help draft, refine, and structure guidelines, patterns, and onboarding material.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Software Engineer | Consultant

Morgan Stanley, remote

August 2020 - November 2021

Project Overview:

Led frontend development for multiple financial software projects, focusing on user-friendly, visually appealing interfaces and leveraging contemporary LLM tools to support design exploration, performance analysis, and developer productivity. Used AI-assisted workflows to help optimize applications for reliability, maintainability, and faster delivery cycles.

Key Contributions:

- **UI/UX Design:** Developed and optimized interfaces to enhance user experience and engagement, using LLMs to generate and refine UX copy, error messages, and interaction guidelines.
- **Architecture:** Designed and implemented scalable frontend architectures for complex web applications, supported by AI-assisted code exploration, refactoring suggestions, and documentation.
- **Technical Development:** Built high-quality React applications with Tailwind, Bootstrap, and Material UI, integrating AI coding assistants into day-to-day development for boilerplate generation, tests, and code reviews.
- **Onboarding Procedures:** Created comprehensive onboarding playbooks, tools, and best practices for frontend developers, using LLMs to help draft, standardize, and maintain documentation and training materials.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Senior Frontend Developer | Developers Advocate

Wayra Finance & Technology, Göteborg, Sweden

March 2020 - June 2020

Project Overview: Led the front-end development team, enhancing user interfaces and user experiences across digital banking platforms.

Key Contributions:

- Advised on future architecture for application and platform
- Implementation of IAM and KeyCloak into platform
- AI-driven Technical Development: Utilized technologies such as React, Vue, Tailwind, Bootstrap, and Material UI to develop high-quality web applications.
- Leadership and Mentorship: Acted as the Frontend Lead, providing support and guidance to junior developers.
- Formed data driven advisory board to guide company forward in ai-driven development of platform, services and technical development

University Lecturer | Developer

University of Borås, Borås, Sweden

January 2018 - March 2020

- Lecturing and Curriculum Development: Delivered lectures on front end technologies, including JavaScript, React, HTML, CSS, and CMS platforms.
- Covered cloud services and their integration into ai-driven front end development, focusing on platforms such as AWS and Google Cloud.
- Developed course materials, including syllabi, assignments, and projects, to ensure comprehensive coverage of modern front end development practices.
- Program Development and Advisory: Served on the university board to advise and develop new educational programs focusing on UX/UI design.
- Collaborated with colleagues to create a forward-thinking curriculum that integrates user experience and user interface design principles with technical front end skills.
- Organized workshops and seminars to introduce students to the latest trends and technologies in front end development with AI, and UX/UI design.
- Mentorship and Guidance: Provided mentorship and guidance to students, assisting with projects, research, and career development.
- Facilitated student involvement in industry projects and internships, bridging the gap between academic learning and practical application.
- Evaluated student performance through assessments, providing constructive feedback to support their growth and learning, with the support of AI models.

Projects

Lead Developer, Designer and Project Manager

Leijon Finance & Wealth Management, Västra Götaland, Sweden

December 2023 - Present

Technologies: React, Next.js, Tailwind CSS, GraphQL, Python, PostgreSQL, Apollo Client, shadcn/ui, Gemini, ChatGPT, Claude, Grok, xAI, Ollama, LMStudio, CoPilot

Project Overview:

- Developing a comprehensive digital platform that integrates traditional banking services, investment capabilities, and professional legal services.
- Creating a secure, user-friendly experience for customers to manage their entire financial portfolio and legal needs in one place.

Key Contributions:

- Designed and implemented a modern, scalable architecture featuring a React frontend with Next.js, GraphQL API server, and Python microservices.
- Developed a sophisticated Role-Based Access Control (RBAC) system for managing user permissions across banking and legal services.
- Created an advanced credit scoring system incorporating both FICO and VantageScore methodologies for individuals and businesses.

Features and Integrations:

- Implemented core banking services including account management, transfers, payments, and multi-currency support.
- Integrated investment services with real-time market data, portfolio management, and trading capabilities.
- Developed comprehensive legal services integration with secure client portals, automated contract generation, and compliance monitoring.
- Incorporated security measures including encryption, multi-factor authentication, and regular security audits to ensure compliance with financial regulations.

Christer Johansson | Senior software engineer specialized in AI-enhanced development

Lead Developer, Designer and Project Manager

Billiga Webhotell, Stenungsund, Sweden

January 2017 - July 2022

Technologies: PHP, MySQL, WordPress, HTML, CSS, JavaScript, LLMs

Project Overview:

- Created and developed a AI-driven price comparison service with reviews and guides based on a given business plan.
- The website, built on WordPress, is an online service that reviews and compares prices of web hosting services from around the world.
- Key Contributions:
- Over a 12-month period, developed everything from a business plan, project plan, and concept page to the final product, which is now live at Billiga Webhotell.
- Continuously update the site with new reviews and content.
- Features and Integrations:
- Enabled both editors and visitors to rate web hosting services, with visitors able to comment on and rate all reviews.
- Integrated the site with social media platforms to share articles from both editors and visitors.

Languages

- Swedish: Native proficiency
- English: Full professional proficiency

Additional Information

"Christer has demonstrated outstanding proficiency in front-end technologies and has been an invaluable asset to his teams. His strategic contributions, innovative thinking, and commitment to continuous learning make him a highly valuable member of any team. He is recognized for his expertise in UI/UX design, content management, cloud services, and his entrepreneurial spirit." – Volvo Group Connected Solutions, 2022

Publications

- 70 Intervjufrågor: Din nyckel till framgång i arbetsintervjun, GitBook, 2024
- Learn React Now, GitBook, 2020
- React Training Course, University of Borås, 2020
- The JavaScript Workshop, Packt Publishing, 2019

Certificate of Excellence

As a Senior Front-End Engineer and Information Architect, Christer has demonstrated outstanding proficiency in front-end technologies and has been an invaluable asset to our team.

In addition to his technical skills, Christer has a robust background in information architecture and web content management, which complements his technical capabilities. His academic background, with a Bachelor of Science degree in Library and Information Science, specialized in Web Content Management and Design, provides a solid foundation for his work.

Christer's commitment to continuous learning and staying updated with the latest technologies is commendable. He is not only a highly skilled engineer but also an innovative thinker who consistently brings fresh ideas to the table. His entrepreneurial spirit and dedication to his craft make him a highly valuable member of any team.

With over 20 years of experience in the field, Christer has shown remarkable skill and expertise in a range of front-end technologies and tools, including:

- **React:** For building dynamic and efficient user interfaces.
- **NodeJS:** For server-side scripting and network application development.
- **JSX:** For writing cleaner and more maintainable code.
- **TypeScript:** For ensuring type safety and reducing bugs.
- **HTML and JavaScript:** For structuring web content and implementing interactive elements.
- **CSS and TailwindCSS:** For designing and implementing responsive and visually appealing user interfaces.
- **WCAG (Web Content Accessibility Guidelines) and WAI (Web Accessibility Initiative):** For ensuring web accessibility and inclusive design.
- **Testing:** For maintaining high code quality through unit testing, integration testing, and end-to-end testing.
- **Agile Methodologies:** For efficiently managing and delivering projects through iterative development and teamwork.
- **Teamwork and Collaboration:** For effectively working in dynamic team environments and contributing to collective success.
- **Information Architecture:** For organizing and structuring web content in a user-friendly manner.

Christer's contributions to the project along with his specialized knowledge in information architecture, have significantly enhanced the quality and effectiveness of the projects tasks he has worked on. His commitment to continuous learning and his ability to adapt to new technologies make him a standout professional in the field.
